

POTSDAM SUMMER SCHOOL 2022

Towards a Sustainable Transformation –
Climate, Energy and Nature in a Changing World

from August 22 until August 31 in Potsdam, Germany

Action on climate change needs a joint and strong collaboration of the entire international community. The burdens and causes of climate change are unevenly distributed over the world, and future generations will suffer much more.

The **transformation of energy systems** is obviously one of the key factors of climate mitigation. Fossil fuel-free means of producing energy must be developed and implemented. But this transformation also involves a societal change.

The **loss of biodiversity and climate change** threaten human living conditions on our planet. The examples of polar and marine regions or the amazon region illustrate the importance of nature conservation.

The aim of the Potsdam Summer School is to bring together talented early-career scientists and young professionals operating in the private sector, governmental agencies, and non-governmental organisations from many different parts of the world to discuss frontier (research) questions on future sustainable development.

We also intend to enable participants to engage with various sectors of the public in their home countries. Our goal is to improve science awareness and help to develop informed opinions and enhance the transferable skills of researchers and practitioners. Experts, stakeholders, and guest lecturers from high level national and international institutes and organisations will contribute knowledge and insights to the Summer School programme which will comprise lectures, various discussion formats, and interactive group work activities.

Thus, the Potsdam Summer School provides a unique opportunity for all participants to foster international cooperation and an interdisciplinary exchange of ideas.

In partnership with [Geo.X](#) and the [City of Potsdam](#), the 2022 Potsdam Summer School will be jointly organised by the [Alfred Wegener Institute, Helmholtz Centre for Polar and Marine Research \(AWI\)](#), the [Helmholtz-Centre Potsdam – GFZ German Research Centre for Geosciences](#), the [Institute for Advanced Sustainability Studies \(IASS\)](#), the [Potsdam Institute for Climate Impact Research \(PIK\)](#), and the [University of Potsdam](#).

The call for applications will start on February 01, 2022. The deadline for submitting applications will be April 30, 2022. The organisers intend to conduct the 10-day programme in a format whereby all participants and speakers will be present in Potsdam. Should it be the case that the overall situation regarding the current pandemic precludes in-person attendance the organisers will revert to a virtual format.
